EXPERIENCE

Tatilcikuş, İzmir - Project Manager

JAN 2025 - PRESENT

Tatilcikuş, İzmir - Back-end Developer

JAN 2025 - PRESENT

Tatilcikuş, İzmir - Full-stack Developer

JUN 2022 - JAN 2025

There are many projects that I really enjoy developing in this company.

We have a virtual POS project developed with PHP and Laravel. It has many bank integrations.

We also have a short URL redirection project developed with PHP and Laravel. It redirects the incoming short URL to the link it should go to.

We also have an in-office management project. Its backend uses Clean Architecture and CQRS pattern, and it is an ASP.NET Web API project. React.js was used in the front-end. We continue to develop this project according to our needs in the office.

We also have another project that has API integrations with some of the companies we work with and has a CRM panel that we developed. In the back-end of this project, N-Tier Architecture was used, and it is an ASP.NET Web API project. React.js was used in the front-end. It runs on our VM server on Azure. It also uses up-to-date technologies such as Docker, RabbitMQ and SignalR.
